Product Description

Torx Thread Locking Screw Self Tapping Special Screw With Steel And Nylon Patch

FINEX | Fine and Express FASTENERS

Product Overview

Ensure secure, vibration-resistant fastening with our **Torx Thread-Locking Self-Tapping Screws**, engineered for demanding industrial applications. Combining a Torx drive for precision torque control, self-tapping threads for easy installation, and a nylon patch for anti-loosening, these screws excel in automotive, aerospace, and machinery where reliability is non-negotiable. Crafted from high-strength steel with corrosion-resistant coatings, they offer unmatched durability in harsh environments.

Key Features

Torx Drive (T10–T40)

Six-point star design maximizes torque transfer, reduces cam-out, and ensures tamper-resistant security.

Integrated Nylon Patch

Pre-applied nylon thread locker deforms under pressure to prevent loosening from vibrations or dynamic loads.

Self-Tapping Design

Sharp, hardened threads cut into metal, plastic, or wood without pre-drilling, saving time and labor.

High-Strength Steel Construction

Grade 8.8 or 10.9 alloy steel, heat-treated for tensile strength up to **1,200 MPa**, with optional zinc plating or black oxide coating.

Corrosion Resistance

Zinc or black oxide finish withstands harsh environments, including humidity, chemicals, and saltwater.

ROHS & ISO 9001 Certified

Compliant with global safety and quality standards.

VS

Bad screws on the market: bad carbon steel material, Chemical Element content in Steel doesn't meet the requirement of ISO standard, they will be easily broken after 90° bent, high strength and bad toughness.

NO5.Mechanical Properties comparison

Our self tapping screws: our screws have high strength, enough hardness, good toughness after heat treated, they won't be broken after bent.

VS

Bad screws on the market: they have high strength and bad toughness, thread will easily be broken, because the screws are not tempered.

NO6. Corrosion Resistance Comparison of SUS304

Our SUS304 screws: nickel chemical element content won't be less than 8, meets ISO requirement. The finish won't be oxidized, rusted and has good anti-corrosion capacity. standard, they won't be broken after 90° bent, high strength, good toughness.

VS

SUS304 screws on the market: nickel chemical element content will be less than 8, even doesn't have nickel plated, which doesn't meet ISO requirement. The finish will be oxidized, rusted and lose anti-corrosion capacity.
