Product Description

High-Temperature A2-70 Stainless Steel Threaded Insert for Automotive Exhaust Systems

FINEX | Fine and Express FASTENERS

Product Overview

Our A2-70 Stainless Steel Threaded Insert is engineered for high-temperature environments, specifically tailored for automotive exhaust systems. Crafted from 304 stainless steel (A2-70 grade), this insert combines exceptional heat resistance (up to 870°C/1,598°F) with robust mechanical strength, making it ideal for securing components in exhaust manifolds, catalytic converters, and mufflers. Its corrosion-resistant properties ensure longevity in harsh, moisture-rich, and chemically corrosive conditions.

Key Features

A2-70 Stainless Steel (304 Grade)

High-Temperature Resistance: Withstands continuous exposure up to 870°C, perfect for exhaust components.

Corrosion & Oxidation Resistance: Resists scaling, rust, and corrosive exhaust gases (NOx, SOx).

Optimized for Automotive Exhaust Systems

Thermal Expansion Compatibility: Matches the thermal expansion rates of exhaust metals to prevent loosening.

Knurled/Barbed Exterior: Grips securely into substrates, resisting vibration-induced loosening.

Durable Thread Design

Metric Threads (M6–M12): Compatible with standard exhaust bolts and studs.

Reusable Threads: Precision-machined internal threads ensure repeated assembly without wear.

Easy Installation

Press-Fit, Weld-In, or Screw-In Options: Flexible installation methods for varied exhaust components.

NO1.Drive compariason

NO2.Torque comparison

NO3.Screw Plating Comparison

Our screws: good finish, clear thread, even coating, bright appearance.

VS

Bad screws on the market: bad finish, uneven coating, thread is oxidized, the finish is blacked.

NO4.Screw Material Comparison

Our screws: we use quality carbon steel material, Chemical Element content in Steel meets the requirement of ISO standard, they won't be broken after 90° bent, high strength, good toughness requirement of ISO

VS

Bad screws on the market: bad carbon steel material, Chemical Element content in Steel doesn't meet the requirement of ISO standard, they will be easily broken after 90° bent, high strength and bad toughness.

NO5.Mechanical Properties comparison

Our self tapping screws: our screws have high strength, enough hardness, good toughness after heat treated, they won't be broken after bent.

VS

Bad screws on the market: they have high strength and bad toughness, thread will easily be broken, because the screws are not tempered.

NO6. Corrosion Resistance Comparison of SUS304

Our SUS304 screws: nickel chemical element content won't be less than 8, meets ISO requirement. The finish won't be oxidized, rusted and has good anti-corrosion capacity standard, they won't be broken after 90° bent, high strength, good toughness.

VS

SUS304 screws on the market: nickel chemical element content will be less than 8, even doesn't have nickel plated, which doesn't meet ISO requirement. The finish will be oxidized, rusted and lose anti-corrosion capacity.
