Product Description

Aircraft-Grade 6061 Anodized Thumb Screw – Elevated Shoulder & Knurled Grip for Oscilloscope

FINEX | Fine and Express FASTENERS

Product Overview

Our Aircraft-Grade 6061 Anodized Thumb Screw combines aerospace-grade durability with ergonomic design for secure, tool-free adjustments in sensitive electronic and laboratory environments. Featuring a precision-engineered elevated shoulder, knurled grip, and non-conductive anodized finish, this screw is ideal for oscilloscopes, test equipment, and aerospace instrumentation requiring vibration resistance, electrical safety, and frequent calibration.

Key Features

6061-T6 Aluminum (Aircraft-Grade)

High Strength-to-Weight Ratio: Robust yet lightweight, perfect for portable or vibration-prone equipment.

Hard Anodized Finish (Type III): Superior corrosion and wear resistance, withstanding harsh lab or industrial environments.

Elevated Shoulder Design

Spacer Function: Maintains consistent clearance between components, preventing electrical contact or interference.

Thermal Isolation: Reduces heat transfer between mounted devices and chassis.

Knurled Grip & Non-Conductive

Slip-Resistant Texture: Diamond-pattern knurling ensures secure grip, even with gloves or oily hands.

Non-Magnetic & Non-Conductive: Eliminates risk of electrical shorts or magnetic interference in sensitive electronics.

Precision Threads

Metric Threads (M3–M6): Compatible with standard instrumentation mounting holes (M3×0.5, M4×0.7, M5×0.8, M6×1.0).

Vibration Resistance: Thread-locking design prevents loosening in high-frequency environments.

Why Choose Us

NO1.Drive compariason

NO2.Torque comparison

NO3.Screw Plating Comparison

Our screws: good finish, clear thread, even coating, bright appearance.

VS

Bad screws on the market: bad finish, uneven coating, thread is oxidized, the finish is blacked.

NO4.Screw Material Comparison

Our screws: we use quality carbon steel material, Chemical Element content in Steel meets the requirement of ISO standard, they won't be broken after 90° bent, high strength, good toughness requirement of ISO

VS

Bad screws on the market: bad carbon steel material, Chemical Element content in Steel doesn't meet the requirement of ISO standard, they will be easily broken after 90° bent, high strength and bad toughness.

NO5.Mechanical Properties comparison

Our self tapping screws: our screws have high strength, enough hardness, good toughness after heat treated, they won't be broken after bent.

VS

Bad screws on the market: they have high strength and bad toughness, thread will easily be broken, because the screws are not tempered.

NO6. Corrosion Resistance Comparison of SUS304

Our SUS304 screws: nickel chemical element content won't be less than 8, meets ISO requirement. The finish won't be oxidized, rusted and has good anti-corrosion capacity standard, they won't be broken after 90° bent, high strength, good toughness.

VS

SUS304 screws on the market: nickel chemical element content will be less than 8, even doesn't have nickel plated, which doesn't meet ISO requirement. The finish will be oxidized, rusted and lose anti-corrosion capacity.
