## Product Description

A2-70 Stainless Hex Flange Screw – Serrated Undercut

### FINEX | Fine and Express FASTENERS

## Product Overview

Our A2-70 Stainless Hex Flange Screw combines the corrosion resistance of 304 stainless steel with a serrated undercut design to deliver unmatched vibration-proof performance in demanding environments. Ideal for automotive, marine, and industrial machinery, this screw features an integrated flange to eliminate the need for washers and serrated threads that bite into materials, preventing loosening under dynamic loads.

## Key Features

A2-70 Stainless Steel (304 Grade)

Corrosion Resistance: Withstands saltwater, humidity, and mild chemicals, perfect for marine and outdoor applications.

High Tensile Strength: 700 MPa tensile strength for secure, long-lasting fastening.

Hex Flange Head

Integrated Washer Function: Distributes load evenly, reducing surface damage on soft materials like plastics or composites.

Hex Drive Compatibility: Compatible with standard wrenches or sockets (e.g., 10mm for M6).

Serrated Undercut Design

Anti-Vibration Performance: Serrations under the flange bite into the material, resisting rotation and loosening.

Reusable: Maintains grip even after multiple installations.

Certified Quality

ISO 3506 (Stainless Steel Fasteners), ASTM F593, RoHS, and ISO 9001 compliant.

## Why Choose Us

### Why Choose Us?

**OEM/ODM Support:** Full custom packaging, branding, and documentation.

**Quality Assurance:** ISO 9001-certified with full material traceability and testing (salt-spray, torque, tensile).

**Flexible MOQs:** Prototype batches to large-scale production.

**Fast Turnaround:** 10–15 days for standard orders; expedited options available.

#### NO1.Drive compariason

#### NO2.Torque comparison

### NO3.Screw Plating Comparison

Our screws: good finish, clear thread, even coating, bright appearance.

VS

Bad screws on the market: bad finish, uneven coating, thread is oxidized, the finish is blacked.

### NO4.Screw Material Comparison

Our screws: we use quality carbon steel material, Chemical Element content in Steel meets the requirement of ISO standard, they won't be broken after 90° bent, high strength, good toughness requirement of ISO

VS

Bad screws on the market: bad carbon steel material, Chemical Element content in Steel doesn't meet the requirement of ISO standard, they will be easily broken after 90° bent, high strength and bad toughness.

### NO5.Mechanical Properties comparison

Our self tapping screws: our screws have high strength, enough hardness, good toughness after heat treated, they won't be broken after bent.

VS

Bad screws on the market: they have high strength and bad toughness, thread will easily be broken, because the screws are not tempered.

### NO6. Corrosion Resistance Comparison of SUS304

Our SUS304 screws: nickel chemical element content won't be less than 8, meets ISO requirement. The finish won't be oxidized, rusted and has good anti-corrosion capacity standard, they won't be broken after 90° bent, high strength, good toughness.

VS

SUS304 screws on the market: nickel chemical element content will be less than 8, even doesn't have nickel plated, which doesn't meet ISO requirement. The finish will be oxidized, rusted and lose anti-corrosion capacity.
