Product Description

Custom Coarse Thread Knurled Shank Torx Drywall Screw for Gypsum Board

FINEX | Fine and Express FASTENERS

Product Overview

Our Custom Coarse Thread Knurled Shank Torx Drywall Screw is engineered for rapid, secure fastening of gypsum board, plasterboard, and drywall panels. Featuring a knurled shank to prevent back-out, a Torx T20 drive for high-torque installation, and self-tapping coarse threads, this screw ensures effortless penetration and long-term stability in wood or metal studs. Ideal for contractors and DIYers, it combines speed, durability, and precision for flawless drywall installations.

Key Features

Knurled Shank Design

Anti-Back-Out Grip: Knurling under the head bites into the board, reducing slippage and maintaining flush positioning.

No Dimpling Required: Minimizes surface damage compared to standard drywall screws.

Torx T20 Drive

High Torque Transfer: Reduces cam-out and driver slippage for faster, frustration-free installation.

Compatibility: Works with Torx T20 bits (included in bulk orders).

Coarse Thread Self-Tapping Tip

Effortless Penetration: Sharp, self-tapping point eliminates pre-drilling in wood or light-gauge metal studs.

Optimized for Gypsum: Coarse threads grip drywall securely without tearing paper surfaces.

Corrosion-Resistant Coating

Phosphate or Black Oxide Finish: Protects against rust in humid environments (e.g., bathrooms, basements).

Smooth Driving: Coating reduces friction during installation.

Hardened Steel Construction

Durable & Reusable: Withstands repetitive use in automatic screw guns or drills.

Why Choose Us

NO1.Drive compariason

NO2.Torque comparison

NO3.Screw Plating Comparison

Our screws: good finish, clear thread, even coating, bright appearance.

VS

Bad screws on the market: bad finish, uneven coating, thread is oxidized, the finish is blacked.

NO4.Screw Material Comparison

Our screws: we use quality carbon steel material, Chemical Element content in Steel meets the requirement of ISO standard, they won't be broken after 90° bent, high strength, good toughness requirement of ISO

VS

Bad screws on the market: bad carbon steel material, Chemical Element content in Steel doesn't meet the requirement of ISO standard, they will be easily broken after 90° bent, high strength and bad toughness.

NO5.Mechanical Properties comparison

Our self tapping screws: our screws have high strength, enough hardness, good toughness after heat treated, they won't be broken after bent.

VS

Bad screws on the market: they have high strength and bad toughness, thread will easily be broken, because the screws are not tempered.

NO6. Corrosion Resistance Comparison of SUS304

Our SUS304 screws: nickel chemical element content won't be less than 8, meets ISO requirement. The finish won't be oxidized, rusted and has good anti-corrosion capacity standard, they won't be broken after 90° bent, high strength, good toughness.

VS

SUS304 screws on the market: nickel chemical element content will be less than 8, even doesn't have nickel plated, which doesn't meet ISO requirement. The finish will be oxidized, rusted and lose anti-corrosion capacity.
